Date: April 10, 2023

Subject: Screening for HIV Infection

Summary: Information for Improving Human Immunodeficiency Virus (HIV) Screening Rates

In 2020, Louisiana ranked fourth in the United States for HIV case rates (15.6 per 100,000 population)⁽¹⁾ and third highest in AIDS case rates (11.1 per 100,000).⁽²⁾

Age is a risk factor, with 25% of all new HIV diagnoses in 2020 occurring among Louisianans aged 13-24 years.

Geographic and racial disparities have also been reported. Of the 727 new HIV cases diagnosed in Louisiana in 2020, 26% occurred in New Orleans and 20% in Baton Rouge.⁽²⁾ African Americans comprised 32% of the Louisiana state population in 2020 yet were disproportionately over-represented among those newly diagnosed with HIV, at 70%.⁽²⁾

What do you need to know?

Routine HIV Screening: The Centers for Disease Control and Prevention (CDC) recommends *everyone* between the ages of 13 and 64 get tested for HIV at least once, and people with risk factors, including injection drug use, contact with and suspected exposure to sexually transmitted infections, or high-risk sexual behavior, get tested annually.⁽⁴⁾

Pregnancy Screening: The United States Preventive Services Taskforce (USPSTF) recommends all pregnant persons should be screened for HIV during the pregnancy, including those who present in labor and have not previously had HIV testing during the current pregnancy. In addition, HIV screening should occur with each pregnancy.⁽³⁾

Goal of Screening: Early detection and access to care can improve the survival and quality of life of our members, as well as prevent further HIV transmission.

HIV Test Procedure Codes and Encounters for HIV Screening Diagnosis Codes:

- **HIV Test Procedure Code:** 86689 HTLV or HIV antibody, confirmatory test (e.g., Western Blot)
- **Antibody:**

- 86701 HIV-1
- 86702 HIV-2
- 86703 HIV-1 and HIV-2, single result
- 87389- For HIV-1 antigen(s) with HIV-1 and HIV-2 antibodies, single result
- When HIV immunoassay is performed using a kit or transportable instrument that wholly or in part consists of a single use, disposable analytical chamber, the service may be identified by adding modifier 92 to the usual HIV testing code
- **Infectious agent detection by nucleic acid (DNA or RNA):**
 - 87534 HIV-1, direct probe technique
 - 87535 HIV-1, amplified probe technique, includes reverse transcription when performed
 - 87536 HIV-1, quantification, includes reverse transcription when performed
 - 87357 HIV-2, direct probe technique
 - 87538 HIV-2, amplified probe technique, includes reverse transcription when performed
 - 87539 HIV-2, quantification, includes reverse transcription when performed
- **Infectious agent antigen detection by immunoassay technique, (eg., enzyme immunoassay [EIA], enzyme- linked immunosorbent assay [ELISA], immunochemiluminometric assay [IMCA]) qualitative or semiquantitative, multiple-step method:**
 - 87389 HIV-1 antigen(s), with HIV-1 and HIV-2 antibodies, single result
 - 87390 HIV-1
 - 87391 HIV-2
- **HIV Screening Encounter ICD-10 Diagnosis Codes: Z11.4 Encounter for screening for human immunodeficiency virus HIV screening**
